

Instructions

Installing & connecting

1. The database, views, functions, procedures and data are all in the one script.
2. Change or add in create/use database information.
 - a. Currently is creates a scheme "CareerSiteDB" and selects it to use. (I had to change it to "stewak5" to use it in cssgate) but CareerSiteDB is the schema I used for the local host.
3. Run the whole script.
4. In the php files, open the file "connectdb.php"
5. Enter the necessary information for hostname, username and password.
 - a. Both local and cssgate codes are in the file.
6. Change the "Use" command on line 27 to whatever the name of the db is.

Search by Keyword

1. Type a keyword into the search field.
2. Press "go".
3. Keywords are found from the title, description, experience required and duties.

Applicant add job to cart
